FREE PROMPT PACK

12 AI Prompts for Power BI Analysts

12 أمرًا للذكاء الاصطناعي لمحللي Power BI

Copy into Claude or ChatGPT, replace the [brackets] with your own details, and always verify the result.

1 Clean a messy table

Power Query | First pass on a new data source.

```
Act as a Power Query expert. My table has these columns: [paste column names]. Problems: [list them, for example extra spaces, duplicate rows, dates stored as text, blanks in Region]. Write the M code that fixes each problem. Add a comment above every step.
```

تنظيف جدول غير منظم: اذكر المشكلات بدقة لتحصل على كود مناسب.

2 Combine monthly files from a folder

Power Query | You receive one file per month with the same columns.

```
Act as a Power Query expert. I receive one Excel file per month in a folder, all with these columns: [list]. Give me the exact steps to combine them with Get Data > Folder, add the file name as a column, and handle a file with a different header. Include M code for any custom step.
```

دمج ملفات شهرية من مجلد واحد، مع التعامل مع اختلاف العناوين.

3 Data quality audit

Power Query | Before you trust a new dataset.

```
Act as a data quality analyst. Here are 20 sample rows and the column list: [paste, with sensitive values replaced]. List every data quality issue you can see (types, blanks, duplicates, inconsistent spelling, outliers), rank them by business risk, and suggest the Power Query step that fixes each one.
```

مراجعة جودة البيانات قبل الاعتماد عليها، مع ترتيب المشكلات حسب الخطورة.

4 Design a star schema

Data modeling | Starting a new model, or reviewing an inherited one.

```
Act as a senior Power BI data modeler. Here are my tables and columns: [paste]. Propose a star schema: which tables are facts, which are dimensions, the keys, and the relationships (cardinality and filter direction). Flag anything that could cause wrong totals.
```

تصميم Star Schema: تحديد جداول Fact وDimension والعلاقات.

5 Find the grain of a table

Data modeling | Totals look wrong and you are not sure why.

```
Act as a BI mentor. Here is a sample of my
fact table: [paste 10 rows]. Tell me what
one row represents (the grain), whether
there are duplicate rows at that grain,
and how the grain affects SUM and COUNT
measures.
```

تحديد مستوى التفصيل (Grain) لجدول Fact وأثره على الإجماليات.

6 Explain and debug a measure

DAX | You inherited a measure nobody understands.

```
Act as a DAX teacher. Explain this measure
line by line in simple words: [paste
measure]. Then tell me: (1) what filter
context it expects, (2) one scenario where
it would return a wrong result, (3) a
cleaner version using variables.
```

شرح مقياس DAX سطرًا بسطر واكتشاف الحالات التي يخطئ فيها.

7 Time intelligence set

DAX | You need YTD, MTD, previous year and growth fast.

```
Act as a senior Power BI developer. My
model has a Sales table with an Amount
column and a marked Date table named
'Date'. Write DAX measures for Sales, YTD
Sales, MTD Sales, Previous Year Sales and
YoY %. Use DIVIDE. Explain each measure in
one sentence.
```

مجموعة مقاييس التحليل الزمني: YTD وMTD والعام السابق ونسبة النمو.

8 % of total that respects slicers

DAX | Share-of-total visuals that must react to filters.

```
Act as a senior Power BI developer. My
model is a star schema: Sales (Date,
ProductKey, Amount), Product (ProductKey,
Category) and a marked Date table. Write a
DAX measure for % of total sales by
Category that changes with slicers on Date
and Region but ignores the filter on
Category itself. Use DIVIDE and
ALLSELECTED. Explain each line and list
one common mistake.
```

نسبة من الإجمالي تتغير مع الفلاتر الأخرى وتتجاهل فلتر الفئة.

9 Performance review

DAX | A report or visual is slow.

```
Act as a Power BI performance specialist.
Here is my slow measure: [paste]. My model
has [describe tables and row counts]. List
the 5 most likely causes of slowness,
ordered by impact, and for each give a
test I can run in Performance Analyzer. Do
not rewrite anything yet.
```

تشخيص بطء التقرير قبل تعديل أي شيء، مع اختبار لكل سبب.

10 Design review with the 5-second rule

Dashboards | Before publishing a dashboard page.

```
Act as a senior BI designer. I will
describe my dashboard page: [list KPIs,
charts, filters and colors]. Review it
with the 5-second rule. Tell me: (1) what
the viewer notices first, (2) what is
unnecessary, (3) three specific changes to
improve clarity.
```

مراجعة تصميم الصفحة: ما يلفت الانتباه أولًا، وما يمكن حذفه.

11 Executive summary from KPIs

Storytelling | Monthly or weekly management update.

```
Act as a business analyst writing for a
CEO. Here are this month's KPIs vs target
and last year: [paste]. Write a 5-line
executive summary: (1) what happened, (2)
why it likely happened, (3) what it means,
(4) recommended action, (5) one risk to
watch. Do not invent numbers.
```

ملخص تنفيذي من المؤشرات في خمسة أسطر، دون اختلاق أرقام.

12 KPI definition sheet

Storytelling | Two teams report different numbers for the same KPI.

```
Act as a BI governance lead. For each of
these KPIs: [list], write a one-line
definition with: name, formula, source
table, period, owner, and one example of a
common misinterpretation. Format it as a
table I can paste into a glossary page.
```

توحيد تعريف كل مؤشر: المعادلة والمصدر والفترة والمسؤول.

4 rules for using AI with business data

1. Share structure, not secrets: table and column names plus a few sample rows with sensitive values replaced.
2. Give the business definition of each KPI, or AI will guess it.
3. Ask for an explanation, not only the code, so you learn and can review.
4. Test every result on a small sample where you already know the answer.

شارك هيكل البيانات لا البيانات السرية، وحدد تعريف المؤشر، واطلب الشرح، واختبر النتيجة دائمًا.
