Filter Context in 5 Examples

الـ Filter Context في 5 أمثلة

The one DAX idea behind every confusing number, explained with simple examples.

1 Slicers filter measures

```
Total Sales = SUM(Sales[Amount])
-- Region slicer = Egypt
-- Result: Egypt sales only
```

A measure has no fixed value. It is recalculated for whatever is selected.

المقياس يُعاد حسابه حسب الاختيار في الـ Slicer.

2 Visual rows are filters

```
-- Table visual: Category on rows
-- Each row = Total Sales for that
Category
-- Total row = all visible categories
```

Each cell in a visual has its own filter context.

كل خلية في الجدول لها Filter Context خاص بها.

3 CALCULATE replaces a column filter

```
Bike Sales =
CALCULATE([Total Sales],
  Product[Category] = "Bikes")
-- Slicer = Accessories → shows Bikes
sales
```

A filter on a column inside CALCULATE overrides the existing filter on that column.

الفلتر داخل CALCULATE يستبدل الفلتر الموجود على العمود نفسه.

4 KEEPFILTERS respects the slicer

```
Bike Sales (respect slicer) =
CALCULATE([Total Sales],
  KEEPFILTERS(Product[Category] =
"Bikes"))
-- Slicer = Accessories → blank
```

Both conditions must be true, so the measure stays consistent with the selection.

مع KEEPFILTERS يجب تحقق الشرطين معًا.

5 Remove filters for totals and shares

```
Grand Total =
CALCULATE([Total Sales],
REMOVEFILTERS(Product))

% of Visible =
DIVIDE([Total Sales],
  CALCULATE([Total Sales],
ALLSELECTED(Product)))
```

REMOVEFILTERS (or ALL) ignores filters; ALLSELECTED keeps the user's slicer selection.

REMOVEFILTERS تتجاهل الفلاتر، وALLSELECTED تحتفظ باختيار المستخدم.

6 Filter context vs row context

Filter context: the filters applied now (slicers, visual, CALCULATE). Measures live here. Row context: the current row while iterating (calculated columns, SUMX).

المقياس يسأل: ما الظاهر الآن؟ والعمود المحسوب يسأل: ما الصحيح لهذا الصف؟

When a number surprises you, check in this order

1. Slicers on the page
2. Rows and columns of the visual
3. Visual, page and report filters
4. CALCULATE modifiers inside the measure
5. Relationships and their filter direction

عند ظهور رقم غير متوقع، راجع الفلاتر بهذا الترتيب.
